

Portfolio Highlights – Data & Analytics Projects

Retail Sales EDA Analysis – Portfolio Project

- ❖ **Problem / Goal:** Identify profitability gaps across product categories and provide actionable insights, focusing on Furniture.
- ❖ **Actions Taken:** Cleaned and standardized dataset, calculated KPIs, profit margins, and visualized category/sub-category performance.
- ❖ **Key Results:** Furniture underperforming: Tables (-\$17,725), Bookcases (-\$3,472); Technology and Office Supplies strongest categories.
- ❖ **Recommendations:** Optimize production costs, pricing, discounts, and rationalize product portfolio.
- ❖ **Tools Used:** Excel | Python (pandas, matplotlib) | Data Visualization
- ❖ **Outcome:** Ready-to-use executive insights with actionable recommendations and charts for decision-making.

Furniture Profit by Sub-Category

Animal Dataset Cleaning – Portfolio Project

- ❖ **Problem / Goal:** Clean and prepare a messy dataset of European animal observations for analysis.
- ❖ **Actions Taken:** Standardized column names, fixed date formats, converted numeric/categorical columns, removed empty columns, and filled missing values.
- ❖ **Key Results:** Dataset fully cleaned with no missing values; ready for analysis and visualization.
- ❖ **Tools Used:** Python (pandas, numpy) | Data Cleaning & Transformation
- ❖ **Outcome:** Clean, ready-to-analyze dataset enabling robust insights and reporting.

Here I'm showing the full dataset already cleaned. The column `Animal_Code` was eliminated because it didn't contain any values. Nevertheless, the empty rows were filled using the mean for numeric columns and the mode for categorical columns.

First 9 rows (preview)

Animal_Type	Country	Weight_kg	Body_Length_cm	Gender
red squirrel	Poland	39.74550305	39.10772358	male
red squirrel	Poland	39.74550305	39.10772358	male
